

TIME TO BOOK YOUR FALL HEALTH CHECK!

Your trees worked hard all spring and summer long, cleaning our air and providing us with some much-needed shade! After having been through wild storms and extreme heat, they could use a house-call.

What we look for during a Health Check:

DOES YOUR TREE NEED PRUNING?

Are there cracked or damaged limbs in the canopy?

Are branches growing too close to eavestroughs and rooftops?

WHAT WE DO:

Shorten branches extending towards your house.

Raise canopies above rooftops for clearance

TROUBLE WITH YOUR SOIL?

Thin Canopy?

Limited growth?

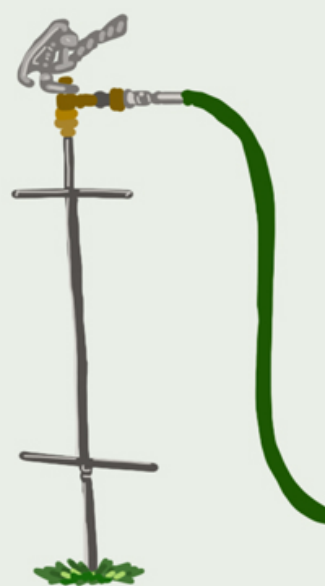

Leaves dropping or changing colour earlier than expected?

WE HAVE SOLUTIONS!

ArborGainTM & Fertilization

Boost your soil's nutrients with our fall-formulated deep root fertilizer and custom ArborGain biostimulant soil conditioner, which will mitigate the stress put on your trees by the extreme summer heat.

Soil Decompaction

We decompact soil with our supersonic air spade tool, and install aeration tubes in the root zone for extra breathing room and water filtration. Roots will continue to grow throughout the fall and need space!

Salt Buster

Salty soils from winter de-icing salts damage trees and plants, which is only noticable the following spring. Even if you don't use salt on your property, your front yard will be exposed to city street spray and salty wind gusts during the winter
