

Your 2019 Fall Health Check

Autumn has arrived! It's a beautiful time of year for our trees. As we enter fall and your trees prepare for their long winter's nap, it's time to give them a good health check up to make sure they're prepared to take on whatever winter throws at them and come back strong and vibrant in the spring.

Is your tree safe for winter?

-  Are there cracked or damaged limbs in the canopy?
-  Are branches growing too close to rooftops or eaves troughs?

Protect your tree from winter storms!

What we can do:

-  Shorten branches extending toward your house
-  Raise canopies above rooftops for clearance
-  Prune out cracked, damaged, dead or diseased limbs
-  Install support cables for limbs with weak unions

Is your tree under stress?

-  Thin canopy, limited growth or leaves dropping earlier than expected?

Most likely damaged soils!

What we can do:

-  ArborGain for Soil Repair
-  Soil Decompaction
-  Soil Aeration Tubes
-  Salt Buffer

Did your tree have a pest problem this summer?

-  Damaged leaves from aphids, caterpillars, scale or other pesky pests?

Your foliage needs some TLC!

What we can do:

-  ArborGain to Feed your Tree
-  Dormant oil to control future infestation
